To arrange a consultation, please contact the centre directly.

LAKELAND
HEARING SERVICES

Lakeland Hearing Services is an independent local firm committed to your hearing health. With nearly 20 years experience helping people to hear, we have built a reputation based on service, personal care and on providing individual solutions to suit a person's hearing needs.

Regular hearing health checks are recommended every three years by the RNID. An ear and hearing examination is a straightforward procedure to confirm the health of your ears, check to see if wax is the problem and to test the sensitivity of your hearing across a wide range of tones.

When did you last get your ears and hearing checked?

Quality of life

Hearing is one of our five senses. A hearing loss alters our perception of the world around us and can lead to frustration, social withdrawal and strained relationships.

Good hearing allows us to connect with the world and to function in it as we choose.

Modern hearing

Today's hearing aid technology ranges from basic good quality digital aids to high-tech intelligent micro computers. All types are available in a variety of styles and sizes from 'in the ear' to 'behind the ear'.

Better hearing with both ears

It's always best to use the hearing you have in both ears; a pair of hearing aids will make speech clearer, even if it's noisy.

Do I really need hearing aids?

If you're not sure that you need a hearing aid but would like the television or the telephone to be louder or clearer, then there are a variety of solutions available - get in touch and we can discuss your needs and suggest the most appropriate equipment.

Hearing Protection

Our ears are highly sensitive and a hearing loss is usually permanent, therefore it makes sense to protect our hearing. Fortunately it's easy to do - we have a range of products available to suit your requirements and budget.

- Basic Ear Defenders & Ear Plugs simply reduce all noise by the same amount.
- Electronic Ear Defenders & ear plugs quieten noise but amplify speech via a battery powered circuit. Ideal for extreme noise situations where conversation needs to be heard.
- Custom Made Ear plugs – custom moulded, individually crafted from non-allergenic medical grade silicone which fit exactly to the shape and contour of your ear and ear canal to provide extreme comfort, durability and efficiency. With the use of different filters [9, 15 & 25dBA], harmful volume is reduced but speech or music can be heard. Ideal for **musicians** and **motorcyclists**.
- **Sleep plugs** are custom made without filters. They are recessed into the ear making them comfortable to sleep in giving a general reduction to all sounds - ideal if your partner snores!
